INDEX TO SUBJECTS

A

Acetic anhydride:
Amino acids, tertiary, action (LEVENE and STEIGER) 581
Dipeptides, action (LEVENE and STEIGER) 581
Acetone:
Blood, diabetes, pancreatic, various organs, effect (HIMWICH, GOLDFARB, and WELLER) 337
—, —, phlorhizin, various organs, effect (HIMWICH, GOLDFARB, and WELLER) 337
Acetyl-dipeptides:
Hydrolysis (LEVENE and STEIGER) 581
Acid(s):
Desoxy, lactones, unsaturated, hydrogenation to. II (JACOBS and SCOTT) 139
Glycogen hydrolysis (SAHYUN and ALSBERG) 235
-Protein combination, egg albumin, purified, rotatory power, relation (ALMQUIST and GREENBERG) 167
Acid hematin:
Solutions, standard, preparation from hemin (ELVEHJEM) 203
Adenylic acid:
Guanylic acid and, hydrolysis rate, comparison (LEVENE and DMOCHOWSKI) 563
Xanthylic acid and, hydrolysis rate, comparison (LEVENE and DMOCHOWSKI) 563
Albumin:
Egg, rotatory power, acid and protein combination, relation (ALMQUIST and GREENBERG) 167
—, — —, alkali and protein combination, relation (ALMQUIST and GREENBERG) 167
Alcohol:
Blood, determination, interferometric (BOCK) 645
Determination, interferometric, blood (BOCK) 645
Alfalfa:
Vitamin A, drying effect (HAUGE and AITKENHEAD) 657
Alkali:
-Protein combination, egg albumin, purified, rotatory power, relation (ALMQUIST and GREENBERG) 167
Protein, effect. I (CSONKA and HORN) 677

Allantoin:
Determination, urine (ALLEN and CERECEDO) 293
Urine, determination (ALLEN and CERECEDO) 293
Alloxan:
Fate (CERECEDO) 283
Alloxantin:
Fate (CERECEDO) 283
Amino acid(s):
Anemia, milk diet, effect (DRABKIN and MILLER) 39
Basic, proteins (BLOCK and VICKERY) 113
—, —, determination (VICKERY and BLOCK) 105
—, silk fibroin (VICKERY and BLOCK) 105
Tertiary, acetic anhydride action (LEVENE and STEIGER) 581
Trivalent, peptides. I (GREENSTEIN) 479
Anemia:
Nutritional, amino acids effect (DRABKIN and MILLER) 39
—, glutamic acid as iron supplement, effect (ELVEHJEM, STEENBOCK, and HART) 197
—, rats, production (ELVEHJEM and KEMMERER) 189
Antioxidant:
Lettuce lipids, unsaponifiable (OLCOTT and MATTILL) 65
Ash:
Bone (MORGULIS) 455
Aspartic acid:
Aspartyl-, titration constants (GREENSTEIN) 479
Aspartyl-aspartic acid:
Titration constants (GREENSTEIN) 479
Avitaminosis:
Gossypol effect (GALLUP) 381

B

Barium peroxide:
Sugar-induced oxidations, formation (SHAFFER and HARNED) 311
Base:
Fixed, determination, micro, urine (HOFFMAN) 787
—, urine, determination, micro (HOFFMAN) 787
Biological material:
Sodium determination, uranyl zinc acetate (BUTLER and TUTHILL) 171
Blood:
Acetone, diabetes, pancreatic, various organs, effect (HIMWICH, GOLDFARB, and WELLER) 337
—, —, phlorhizin, various organs, effect (HIMWICH, GOLDFARB, and WELLER) 337
Alcohol determination, interferometric (BOCK) 645
Lactate, sodium lactate injection effect (PARFENTJEV, SUNTZEFF, and SOKOLOFF) 797

Blood—*continued:*

Limulus polyphemus, sea water, relation (DAILEY, FREMONT-SMITH, and CARROLL) 17

Sugar, combined, tungstic acid filtrates (SCHARLES and WEST) 359

—, diabetes, distribution (SPANNUTH and POWER) 343

— distribution (SPANNUTH and POWER) 343

Blood cell:

Sugar determination, direct and indirect (SPANNUTH and POWER) 343

Blood plasma:

Cerebrospinal fluid and, equilibrium. VI (DAILEY) 5

Proteins, diffusibility (GAEBLER) 467

—, —, pathological (GAEBLER) 467

Blood serum:

Calcium, protein and inorganic phosphate relation (GREENWALD) 551

Sodium, cerebrospinal fluid and, distribution (DAILEY) 5

Body constituents:

Growth, rat, relation (CHANUTIN) 31

Bone:

Ash (MORGULIS) 455

Magnesium salts solutions, solubility (FORBES) 255

C

Calcium:

Blood serum, phosphate, inorganic, and relation (GREENWALD) 551

— — protein and, relation (GREENWALD) 551

Body, food calcium, relation (SHERMAN and BOOHER) 93

Determination, alkalimetric titration. II (FISKE and LOGAN) 211

—, micro, urine (HOFFMAN) 787

Food, body calcium, relation (SHERMAN and BOOHER) 93

Hypercalcemia, ergosterol, irradiated, intake, relation (JONES and RAPOPORT) 153

Hyperphosphatemia, ergosterol, irradiated, intake, relation (JONES and RAPOPORT) 153

Metabolism, ergosterol, irradiated, effect (KERN, MONTGOMERY, and STILL) 365

—, magnesium lactate effect (CARSWELL and WINTER) 411

Precipitation, magnesium presence (FISKE and LOGAN) 211

—, phosphate presence (FISKE and LOGAN) 211

—, sulfate presence (FISKE and LOGAN) 211

—, urine (FISKE and LOGAN) 211

Calcium—*continued:*
Urine, determination, micro (HOFFMAN) 787

Calorimetry:
Clinical. XLVII (McCLELLAN, SPENCER, and FALK) 419

Casein:
Solubility, electrolyte effect (GREEN) 517

Cerebrospinal fluid:
Blood plasma and, equilibrium. VI (DAILEY) 5
Sodium, blood serum and, distribution (DAILEY) 5

Chemical constitution:
Methanes, trisubstituted, with phenyl group, configurational relationship (LEVENE and MARKER) 749
Methylriboside, normal (LEVENE and TIPSON) 623
Optical rotation and. I, II (LEVENE and MARKER) 749
Propionic acids, disubstituted, with phenyl group, configurational relationship (LEVENE and MARKER) 749

Chromophoric group:
Rhodymenia palmata (LEVENE and SCHORMÜLLER) 571

Chromoproteins:
Chemistry. I (LEVENE and SCHORMÜLLER) 571

Copper:
Glutathione, crystalline, oxidation, effect (VOEGTLIN, JOHNSON, and ROSENTHAL) 435
Hemoglobin regeneration, rôle (KEIL and NELSON) 49
Reproduction rôle (KEIL and NELSON) 49

Corpuscle:
See Blood cell.

D

Diabetes:
Blood sugar distribution (SPANNUTH and POWER) 343
Pancreatic, acetone, blood, various organs, effect (HIMWICH, GOLDFARB, and WELLER) 337
Phlorhizin, acetone, blood, various organs, effect (HIMWICH, GOLDFARB, and WELLER) 337

Diet:
Meat, prolonged, respiratory metabolism, effect (McCLELLAN, SPENCER, and FALK) 419
Milk, anemia from, amino acids effect (DRABKIN and MILLER) 39

Dipeptide:
Acetic anhydride action (LEVENE and STEIGER) 581
Acetyl-, hydrolysis (LEVENE and STEIGER) 581

Drying:
Vitamin A, alfalfa, effect (HAUGE and AITKENHEAD) 657

E

Egg:
Albumin, purified, rotatory power, acid and protein combination, relation (ALMQUIST and GREENBERG) 167
—, —, — —, alkali and protein combination, relation (ALMQUIST and GREENBERG) 167

Electrolyte:
Casein solubility, effect (GREEN) 517
Hemoglobin solubility, effect (GREEN) 517

Emulsion:
Linseed oil, oxidation, hematin effect (WRIGHT and VAN ALSTYNE) 71
— —, —, potassium cyanide effect (WRIGHT and VAN ALSTYNE) 71

Enzyme:
See also Oxidase, Phosphatase, Taka-diastase.

Epinephrine:
Glucose from, depancreatized animals (BOLLMAN, MANN, and WILHELMJ) 83

Equilibrium:
Blood plasma and cerebrospinal fluid. VI (DAILEY) 5
Cerebrospinal fluid and blood plasma. VI (DAILEY) 5

Ergosterol:
Activated, heat of combustion (BILLS, MCDONALD, BEMILLER, STEEL, and NUSSMEIER) 775

Ergosterol—*continued:*
Irradiated, calcium metabolism, effect (KERN, MONTGOMERY, and STILL) 365
—, hypercalcemia, calcium intake relation (JONES and RAPOPORT) 153
—, —, phosphorus intake relation (JONES and RAPOPORT) 153
—, hyperphosphatemia, calcium intake relation (JONES and RAPOPORT) 153
—, —, phosphorus intake relation (JONES and RAPOPORT) 153
—, nitrogen metabolism, effect (KERN, MONTGOMERY, and STILL) 365
—, phosphorus metabolism, effect (KERN, MONTGOMERY, and STILL) 365

Eskimo:
Metabolism (HEINBECKER) 327

F

Fibrinogen:
Combining power, acid denaturation (FAY and HENDRIX) 667

Fibroin:
Silk, amino acids, basic (VICKERY and BLOCK) 105

Food:
Calcium, body calcium, relation (SHERMAN and BOOHER) 93

G

Globulin:
Sweet potato (JONES and GERSDORFF) 119

Glucals:
Substituted, benzoic peracid action. II (LEVENE and TIPSON) 631
Glucose:
Epinephrine-liberated, depancreatized animals, origin (BOLLMAN, MANN, and WILHELMJ) 83
Glutamic acid:
Anemia, nutritional, iron supplement, effect (ELVEHJEM, STEENBOCK, and HART) 197
Glutathione:
Crystalline, oxidation, copper effect (VOEGTLIN, JOHNSON, and ROSENTHAL) 435
α-Glycerophosphates:
(KARRER and SALOMON) 407
(KAY) 409
β-Glycerophosphates:
(KARRER and SALOMON) 407
(KAY) 409
Glycogen:
Determination, tissues (SAHYUN) 227
Hydrolysis, acids (SAHYUN and ALSBERG) 235
—, taka-diastase (SAHYUN and ALSBERG) 235
Tissue, determination (SAHYUN) 227
Water storage, liver, relation (BRIDGE and BRIDGES) 181
Gossypol:
Avitaminosis, effect (GALLUP) 381
Toxicity. I (GALLUP) 381
Growth:
Body constituents, rat, relation (CHANUTIN) 31
-Promoting properties, milk, water-soluble portion (SUPPLEE, KAHLENBERG, and FLANIGAN) 705
Guanylic acid:
Adenylic acid and, hydrolysis rate, comparison (LEVENE and DMOCHOWSKI) 563
Xanthylic acid and, hydrolysis rate, comparison (LEVENE and DMOCHOWSKI) 563

H

Heat of combustion:
Ergosterol, activated (BILLS, MCDONALD, BEMILLER, STEEL, and NUSSMEIER) 775
Hematin:
Linseed oil emulsions, oxidation effect (WRIGHT and VAN ALSTYNE) 71
Hemin:
Acid hematin solutions, standard, preparation from (ELVEHJEM) 203
Hemoglobin:
Production. III (DRABKIN and MILLER) 39
Regeneration, copper rôle (KEIL and NELSON) 49
Solubility, electrolyte effect (GREEN) 517
—, salt solutions, concentrated (GREEN) 495

Hexahydrodianhydrostrophanthidin:
Isomeric, and derivatives (JACOBS, ELDERFIELD, HOFFMANN, and GRAVE) 127

Histidine:
Histidyl-, titration constants (GREENSTEIN) 479

Histidyl-histidine:
Titration constants (GREENSTEIN) 479

Hypercalcemia:
Ergosterol, irradiated, calcium intake relation (JONES and RAPOPORT) 153
—, —, phosphorus intake relation (JONES and RAPOPORT) 153

Hyperparathyroidism:
Hypocalcemia following (BODANSKY and JAFFE) 543

Hyperphosphatemia:
Ergosterol, irradiated, calcium intake relation (JONES and RAPOPORT) 153
—, —, phosphorus intake relation (JONES and RAPOPORT) 153

Hypocalcemia:
Hyperparathyroidism (BODANSKY and JAFFE) 543

I

Ipomœa batatas:
See Sweet potato.

Ipomœin:
Protein, secondary, from, enzymic isolation (JONES and GERSDORFF) 119
Sweet potato globulin (JONES and GERSDORFF) 119

Iron:
Anemia, nutritional, glutamic acid supplement, effect (ELVEHJEM, STEENBOCK, and HART) 197

Irradiation:
Ergosterol, calcium metabolism, effect (KERN, MONTGOMERY, and STILL) 365
—, hypercalcemia, calcium intake relation (JONES and RAPOPORT) 153
—, —, phosphorus intake relation (JONES and RAPOPORT) 153
—, hyperphosphatemia, calcium intake relation (JONES and RAPOPORT) 153
—, —, phosphorus intake relation (JONES and RAPOPORT) 153
—, nitrogen metabolism, effect (KERN, MONTGOMERY, and STILL) 365
—, phosphorus metabolism, effect (KERN, MONTGOMERY, and STILL) 365
Ultra-violet, sterols, free, lanolin (BERNHARD and DREKTER) 1

K

Keratins:
Relationship (Block and Vickery) 113

Ketopiperazines:
Alkali action (Levene, Steiger, and Marker) 605

L

Lactate:
Blood, sodium lactate injection effect (Parfentjev, Suntzeff, and Sokoloff) 797

Lactone:
Unsaturated, hydrogenation to desoxy acids. II (Jacobs and Scott) 139

Lanolin:
Sterols, free, ultra-violet irradiation, effect (Bernhard and Drekter) 1

Lettuce:
Lipids, unsaponifiable. II (Olcott and Mattill) 59
—, —. III (Olcott and Mattill) 65
—, —, antioxidant (Olcott and Mattill) 65
—, —, fractionation (Olcott and Mattill) 59

Limulus polyphemus:
Blood, sea water, relation (Dailey, Fremont-Smith, and Carroll) 17

Linseed oil:
Emulsions, oxidation, hematin effect (Wright and Van Alstyne) 71

Linseed oil—*continued:*
Emulsions, oxidation, potassium cyanide effect (Wright and Van Alstyne) 71

Lipid:
Unsaponifiable, lettuce. II (Olcott and Mattill) 59
—, —. III (Olcott and Mattill) 65
—, —, antioxidant (Olcott and Mattill) 65
—, —, fractionation (Olcott and Mattill) 59

Liver:
Water storage, glycogen relation (Bridge and Bridges) 181

M

Magnesium:
Calcium precipitation in presence (Fiske and Logan) 211
Metabolism, magnesium lactate effect (Carswell and Winter) 411
Phosphatase and (Jenner and Kay) 733

Magnesium lactate:
Calcium metabolism, effect (Carswell and Winter) 411
Magnesium metabolism, effect (Carswell and Winter) 411

Magnesium salts:
Bone solubility in solutions (Forbes) 255

Meat:
Respiratory metabolism, prolonged diet, effect (McClellan, Spencer, and Falk) 419
Metabolism:
Calcium, ergosterol, irradiated, effect (Kern, Montgomery, and Still) 365
—, magnesium lactate effect (Carswell and Winter) 411
Eskimos (Heinbecker) 327
Magnesium, magnesium lactate effect (Carswell and Winter) 411
Nitrogen, ergosterol, irradiated, effect (Kern, Montgomery, and Still) 365
Phosphorus, ergosterol, irradiated, effect (Kern, Montgomery, and Still) 365
Purine. I (Allen and Cerecedo) 293
Respiratory. *See* Respiratory metabolism.
Sulfur, pyrimidines effect (Stekol and Cerecedo) 275
Uracil, intermediary (Cerecedo) 269
Methanes:
Trisubstituted, with phenyl group, optically active, configurational relationship (Levene and Marker) 749
Methylriboside:
Normal, ring structure (Levene and Tipson) 623
Milk:
Anemia from, amino acids effect (Drabkin and Miller) 39
Growth-promoting properties, water-soluble portion (Supplee, Kahlenberg, and Flanigan) 705
Vixen (Young and Grant) 805

N

Nitrogen:
Determination, trichloroacetic acid filtrates, source of error (Kay) 727
Metabolism, ergosterol, irradiated, effect (Kern, Montgomery, and Still) 365

O

Oil:
Linseed. *See* Linseed oil.
Optical behavior:
Protein, racemic (Csonka and Horn) 677
Optical rotation:
Chemical structure and. I, II (Levene and Marker) 749
See also Rotatory power.
Oxidase:
Tyramine. II (Bernheim) 299
— oxidation (Bernheim) 299
Oxidation:
Sugar-induced. I (Shaffer and Harned) 311
—, barium peroxide formation (Shaffer and Harned) 311

P

Pancreas:
Diabetes, acetone, blood, various organs, effect (HIMWICH, GOLDFARB, and WELLER) 337

Pancreatectomy:
Glucose, epinephrine-liberated, origin (BOLLMAN, MANN, and WILHELMJ) 83

Parabanic acid:
Fate (CERECEDO) 283

Peptide:
Alkali action (LEVENE, STEIGER, and MARKER) 605
Amino acids, trivalent. I (GREENSTEIN) 479

Phlorhizin:
Diabetes, acetone, blood, various organs, effect (HIMWICH, GOLDFARB, and WELLER) 337

Phosphatase:
Magnesium and (JENNER and KAY) 733
Tissue, mammalian. III (JENNER and KAY) 733

Phosphate:
Calcium precipitation in presence (FISKE and LOGAN) 211
Inorganic, blood serum, calcium and, relation (GREENWALD) 551

Phosphorus:
Determination, trichloroacetic acid filtrates, source of error (KAY) 727

Phosphorus—*continued:*
Hypercalcemia, ergosterol, irradiated, intake, relation (JONES and RAPOPORT) 153
Hyperphosphatemia, ergosterol, irradiated, intake, relation (JONES and RAPOPORT) 153
Metabolism, ergosterol, irradiated, effect (KERN, MONTGOMERY, and STILL) 365

Potassium:
Determination, colorimetric (JACOBS and HOFFMAN) 685

Potassium cyanide:
Linseed oil emulsions, oxidation effect (WRIGHT and VAN ALSTYNE) 71

Potato:
Sweet. *See* Sweet potato.

Propionic acids:
Disubstituted, with phenyl group, configurational relationship (LEVENE and MARKER) 749

Protein(s):
Acid-, combination, egg albumin, purified, rotatory power, relation (ALMQUIST and GREENBERG) 167
Alkali-, combination, egg albumin, purified, rotatory power, relation (ALMQUIST and GREENBERG) 167
Alkali effect. I (CSONKA and HORN) 677
Amino acids, basic (BLOCK and VICKERY) 113

Protein(s)—*continued:*
Amino acids, basic, determination (VICKERY and BLOCK) 105
Blood plasma, diffusibility (GAEBLER) 467
— —, pathological, diffusibility (GAEBLER) 467
— serum, calcium and, relation (GREENWALD) 551
Physical chemistry. VIII (GREEN) 495
— —. IX (GREEN) 517
Racemic, optical behavior (CSONKA and HORN) 677
Salting out (GREEN) 495
Secondary, from ipomœin, enzymic isolation (JONES and GERSDORFF) 119

Purine:
Metabolism. I (ALLEN and CERECEDO) 293

Pyrimidines:
Physiology. IV (CERECEDO) 269
—. V (STEKOL and CERECEDO) 275
—. VI (CERECEDO) 283
Sulfur metabolism, effect (STEKOL and CERECEDO) 275

R

Racemization:
X (LEVENE, STEIGER, and MARKER) 605

Reproduction:
Copper rôle (KEIL and NELSON) 49

Respiratory metabolism:
Meat diet, prolonged, effect (MCCLELLAN, SPENCER, and FALK) 419

Rhodymenia palmata:
Chromophoric group (LEVENE and SCHORMÜLLER) 571

Riboside:
Methyl-, normal, ring structure (LEVENE and TIPSON) 623

Rickets:
Antirachitic factor balance, chick (KLEIN and RUSSELL) 693
— —, fate in chicken. I (KLEIN and RUSSELL) 693

Rotatory power:
Albumin, egg, purified, acid and protein combination, relation (ALMQUIST and GREENBERG) 167
—, —, —, alkali and protein combination, relation (ALMQUIST and GREENBERG) 167
See also Optical rotation.

S

Salt:
Solutions, concentrated, hemoglobin solubility (GREEN) 495

Salting out:
Proteins (GREEN) 495

Silk:
Fibroin, amino acids, basic (Vickery and Block) 105
Sodium:
Biological material, determination, uranyl zinc acetate (Butler and Tuthill) 171
Blood serum and cerebrospinal fluid, distribution (Dailey) 5
Cerebrospinal fluid, and blood serum, distribution (Dailey) 5
Determination, biological material, uranyl zinc acetate (Butler and Tuthill) 171
Sodium lactate:
Blood lactate, injection effect (Parfentjev, Suntzeff, and Sokoloff) 797
Sterols:
Free, lanolin, ultra-violet irradiation, effect (Bernhard and Drekter) 1
Strophanthidin:
Hexahydrodianhydro-, isomeric, and derivatives (Jacobs, Elderfield, Hoffmann, and Grave) 127
Strophanthin:
XXIV (Jacobs, Elderfield, Hoffmann, and Grave) 127
Sugar:
Blood cell, determination, direct and indirect (Spannuth and Power) 343
Sugar—*continued:*
Blood, combined, tungstie acid filtrates (Scharles and West) 359
—, diabetes, distribution (Spannuth and Power) 343
—, distribution (Spannuth and Power) 343
Oxidations induced by. I (Shaffer and Harned) 311
— — —, barium peroxide formation (Shaffer and Harned) 311
Sulfate(s):
Calcium precipitation in presence (Fiske and Logan) 211
Determination, micro, urine (Hoffman) 787
Urine, determination, micro (Hoffman) 787
Sulfur:
Compounds, organic, soluble, color reaction (Grote) 25
Metabolism, pyrimidines effect (Stekol and Cerecedo) 275
Sweet potato:
Ipomœa batatas, globulin (Jones and Gersdorff) 119

T

Taka-diastase:
Glycogen hydrolysis (Sahyun and Alsberg) 235
Tissue:
Glycogen determination (Sahyun) 227

Tissue—*continued:*
Mammalian, phosphatases. III (JENNER and KAY) 733
Titration constant:
Aspartyl-aspartic acid (GREENSTEIN) 479
Histidyl-histidine (GREENSTEIN) 479
Toxicity:
Gossypol. I (GALLUP) 381
Trichloroacetic acid:
Filtrates, nitrogen determination, source of error (KAY) 727
—, phosphorus determination, source of error (KAY) 727
Tungstic acid:
Filtrates, blood, sugar, combined (SCHARLES and WEST) 359
Tyramine:
Oxidase. II (BERNHEIM) 299
Oxidation, oxidase (BERNHEIM) 299

U

Ultra-violet:
Irradiation, sterols, free, lanolin (BERNHARD and DREKTER) 1
Uracil:
Metabolism, intermediary (CERECEDO) 269
Urine:
Allantoin determination (ALLEN and CERECEDO) 293
Urine—*continued:*
Base, fixed, determination, micro (HOFFMAN) 787
Calcium, determination, micro (HOFFMAN) 787
— precipitation (FISKE and LOGAN) 211
Sulfates, determination, micro (HOFFMAN) 787

V

Vitamin(s):
A, alfalfa, drying effect (HAUGE and AITKENHEAD) 657
B complex, milk (SUPPLEE, KAHLENBERG, and FLANIGAN) 705

W

Water:
Sea, *Limulus polyphemus* blood, relation (DAILEY, FREMONT-SMITH, and CARROLL) 17
Storage, liver, glycogen relation (BRIDGE and BRIDGES) 181

X

Xanthylic acid:
Adenylic acid and, hydrolysis rate, comparison (LEVENE and DMOCHOWSKI) 563
Guanylic acid and, hydrolysis rate, comparison (LEVENE and DMOCHOWSKI) 563
